How to Publish Your Website with GitHub Pages

A step-by-step guide for Dipok Deb. You only need a web browser; no programming tools are required.

Your files

File	What it is
`index.html`	All the text on your website. **This is the only file you edit.**
`style.css`	The colors, fonts and layout. You usually don't need to touch it.
`cv.pdf`	Your CV. The "CV" button on the site opens it.
`photo.jpg`	**You add this:** a square photo of yourself, named exactly `photo.jpg`.

Step 1: Create a GitHub account

Go to **https://github.com** and sign up. Choose your username carefully, because your website address will be:

`https://USERNAME.github.io` (for example, `https://dipokdeb.github.io`)

Step 2: Create a special repository

1. Click the **+** at the top right, then click **New repository**.
2. In **Repository name**, type exactly `USERNAME.github.io`. Use your real GitHub username in all lowercase.
3. Choose **Public**.
4. Click **Create repository**.

Step 3: Upload your files

1. On the new repository page, click **uploading an existing file** (or **Add file**, then **Upload files**).
2. Drag in `index.html`, `style.css`, `cv.pdf` and `photo.jpg`.
3. Click the green **Commit changes** button at the bottom.

Step 4: Turn on the website

1. In the repository, open **Settings**, then click **Pages** in the left menu.
2. Under **Source**, choose **Deploy from a branch**.
3. Under **Branch**, choose `main` and `/ (root)`, then click **Save**.
4. Wait 1 to 2 minutes, then open `https://USERNAME.github.io`. Your site is live.

Updating the site later

For example, to add a new paper:

1. Open your repository on github.com and click `index.html`.
2. Click the **pencil icon** (Edit).
3. Find the section, such as `PUBLICATIONS`. Copy one `<li> ... </li>` block, paste it right below, and change the text.
4. Click **Commit changes**. The site updates in about a minute.

Here is what one paper looks like in `index.html`:

```
<li>
  <span class="pub-title">Title of the paper</span><br>
  <span class="venue">Journal or conference, Year</span>
  <a class="btn" href="https://link-to-paper">Paper</a>
</li>
```

To replace your CV, upload a new file named `cv.pdf`. It replaces the old one automatically.

Things to fill in

In `index.html`, find each `href="#"` and replace the `#` with a real web address:

- Your LinkedIn, Google Scholar and GitHub profiles (near the top of the page)
- Links to your papers (in the Publications section)

If you don't have a link for something, delete that line or the `<a ...>...</a>` button.

Privacy note: Your CV contains your home address and phone number, and anyone on the internet can open `cv.pdf`. Consider removing those two lines from the CV before you upload it.
